Prompt Me Live - Getting Started

Version v1.8.1 - MyEvent Labs

Thanks for trying Prompt Me Live. It is a cross-platform teleprompter built for live broadcast, made by people who actually run shows, for people who actually run shows. The goal is simple: reliable prompting when it counts, without the fluff. We are always open to suggestions, bug reports, and “this would help on the day” ideas. Drop a note to hello@myevent-labs.io anytime.

Free vs Pro

- Free for 14 days after first launch.
- During Free: Pro features stay greyed, watermark + periodic Buy Pro reminder, open show files only (no save).
- After day 14: the app stops completely until you enter a valid Pro licence key.
- A Pro key unlocks all Pro features, including save.
- Pro is A$99 (one-time): https://buy.stripe.com/fZu9AS1H6akl0Fb7Zge3e1D

Install

macOS

- Download the Mac build from the shop or GitHub Releases.
- Open the .dmg and drag Prompt Me Live to Applications.
- If macOS blocks it: right-click, then Open, or allow under System Settings, then Privacy & Security.

Windows

- Download and run the Windows installer.
- If SmartScreen appears: More info, then Run anyway.

Linux

- Download the AppImage, then `chmod +x Prompt-Me-Live-*.AppImage`
- Run from a terminal if double-click does nothing.
- If still silent: `./Prompt-Me-Live-*.AppImage --appimage-extract-and-run` (fuse2 / fuse3 if needed).

Enter your Pro licence

- Buy Pro in the app or at the shop (Stripe checkout).
- Your licence key is emailed after payment. Keys may be a short code or a long value that begins with key/; copy the whole key exactly.
- Paste the full key into Licence, then Activate. The field may show only part of a long key while you type - that is fine; spaces and line breaks are ignored.
- Once accepted, Pro features including save unlock.

Tips

- Keep the key email somewhere safe.
- A Pro licence can be activated on up to 2 machines. Deactivate this machine first to move it.
- Updating does not remove a valid Pro licence.
